

# NeuroSpark (NSP)

## AI-Powered Web3 Risk Intelligence Infrastructure

### Executive Summary

NeuroSpark (NSP) is a professional AI-powered Web3 risk intelligence infrastructure project. Its mission is to enhance transparency, security, and risk awareness within decentralized ecosystems.

By combining artificial intelligence with smart contract analytics, NeuroSpark aims to detect hidden mint functions, liquidity vulnerabilities, tokenomic inconsistencies, and contract-level threats before investors are exposed.

### The Problem

The Web3 ecosystem suffers from rug pulls, hidden mint functions, liquidity traps, insider-controlled inflation, and opaque tokenomics. Retail investors lack professional tools to properly evaluate smart contract risk.

### The Solution

NeuroSpark introduces an AI-driven risk scoring infrastructure that analyzes smart contracts, evaluates tokenomics structure, monitors liquidity behavior, detects malicious logic, and generates simplified AI Risk Scores.

### Tokenomics

Token Name: NeuroSpark (NSP)  
Maximum Supply: 500,000,000 NSP  
Minting: Disabled (No Owner Mint)

Allocation:

100,000,000 NSP — Presale (20%)  
400,000,000 NSP — TokenLockVesting (80%)

Vesting Model:  
6 Months Initial Lock  
Monthly 5% Controlled Release  
No hidden inflation

## **AI Platform Fuel Model**

Monthly unlocked tokens are strategically allocated:  
40% — Development & AI Infrastructure  
30% — Partnerships & Ecosystem Growth  
30% — Liquidity & Strategic Expansion

## **Roadmap**

Phase 1 — Infrastructure & Community  
Phase 2 — Presale & Expansion  
Phase 3 — DEX Listing  
Phase 4 — AI Risk Scanner Beta  
Phase 5 — Full Risk Intelligence Platform

## **Disclaimer**

NSP is not financial advice. Cryptocurrency participation involves risk.  
Participants assume full responsibility for their decisions.
