

NEUROSPARK (NSP)

AI-Powered Web3 Risk Intelligence Infrastructure

Detect risk before it costs you.

EXECUTIVE SUMMARY

NeuroSpark is an AI-powered Web3 risk intelligence platform built to eliminate blind investing. It transforms complex blockchain data into actionable insights, allowing users to detect malicious contracts and hidden risks before capital is deployed.

WHY NOW

Web3 adoption is accelerating, yet security infrastructure remains underdeveloped. Billions are lost annually due to exploits and malicious contracts. NeuroSpark positions itself as the intelligence layer for secure decentralized finance.

THE PROBLEM

Retail and institutional users lack accessible tools to evaluate smart contracts. Hidden risks such as rug pulls, liquidity manipulation, and exploit vectors remain undetected until losses occur.

THE SOLUTION

NeuroSpark introduces an AI-driven risk scoring engine that analyzes contracts, liquidity, and tokenomics. It delivers simplified AI Risk Scores, enabling instant and confident decision-making.

PRODUCT VISION

A full-stack Web3 security platform featuring real-time monitoring, AI dashboards, exploit detection, and deep analytics.

TOKENOMICS

Token: NSP
Supply: 500,000,000
Network: BNB Smart Chain

Minting: Disabled

PRESALE STRUCTURE

Duration: 21 days
Hardcap: 500 BNB
Max buy: 5 BNB
Bonus Pool: 10,000,000 NSP
+20% bonus until depletion
Unsold tokens burned

PRICING STAGES

Stage 1: 0.0000046 BNB
Stage 2: 0.0000077 BNB
Stage 3: 0.0000123 BNB

SECURITY

NonReentrant protection
Hardcap enforced
On-chain burn mechanism
No mint function

UTILITY

AI risk analysis
Contract scanning
Premium analytics
Governance (future)

ROADMAP

Phase 1: Contracts & Website
Phase 2: Presale
Phase 3: DEX Launch
Phase 4: AI Beta
Phase 5: Full Platform
